

ILZSG Interactive Lead and Zinc Mine and Smelter Database

The ILZSG interactive lead and zinc mine and smelter database can be accessed via the Statistics section of the ILZSG website (www.ilzsg.org). This interface provides users with access to the extensive records held in the various ILZSG mine, smelter and new projects databases. Information available includes:

- Comprehensive list of world zinc mines including contact details of parent company, mine location, type of mine, start-up data and annual lead and zinc output capacity.
- Comprehensive list of world primary and secondary zinc plants including contact details of parent company, refinery location, refinery start-up date, refinery process and refinery capacity.
- Comprehensive list of world primary and secondary lead plants including contact details of parent company, plant location, smelter and refinery start-up dates, smelter and refinery processes, smelter and refinery capacities.
- Mapping facility available for a number of mines and plants (now being expanded).
- Comprehensive list of lead and zinc mine and smelter projects that are either currently committed or under consideration. Details provided include parent company, name of project, location of project, ore reserves and reserve grades, type of mine/plant, expected start-up (for committed projects), additional lead and/or zinc capacity (for committed projects) and brief explanatory remarks.
- Detailed list of all lead and zinc mine and smelter openings and closures since 2000.
- For each category information may be requested by individual country, a specified number of countries or for all countries and, in the case of projects, by project type.
- **All information will be continuously updated.**
- Ability to export information to Excel, Word or pdf.

Should you have any questions or comments, please do not hesitate to contact us.
